Summary

- Paradigm shift
- Agile vs. DevOps
- So where is security?
- Results of missing component
- DevSecOps
- Where in DevOps?
- Continuous security
- Road to DevSecOps

Paradigm shift

Agile vs. DevOps

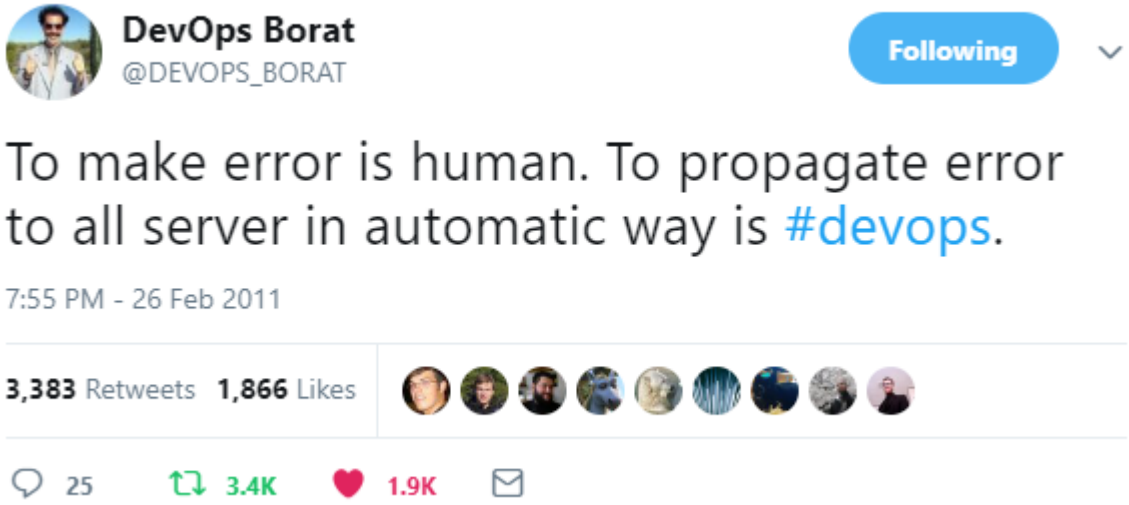

https://www.guru99.com/agile-vs-devops.html

So where is security?

- Currently more than **70%** of organizations are using agile methodology
- DevOps has **not** emphasized security enough
- Security is **seen** as a "Non-Functional Requirement" (NFR)
- In speeding delivery time, sometimes vital aspects are **skipped**

Results of missing component

DevSecOps

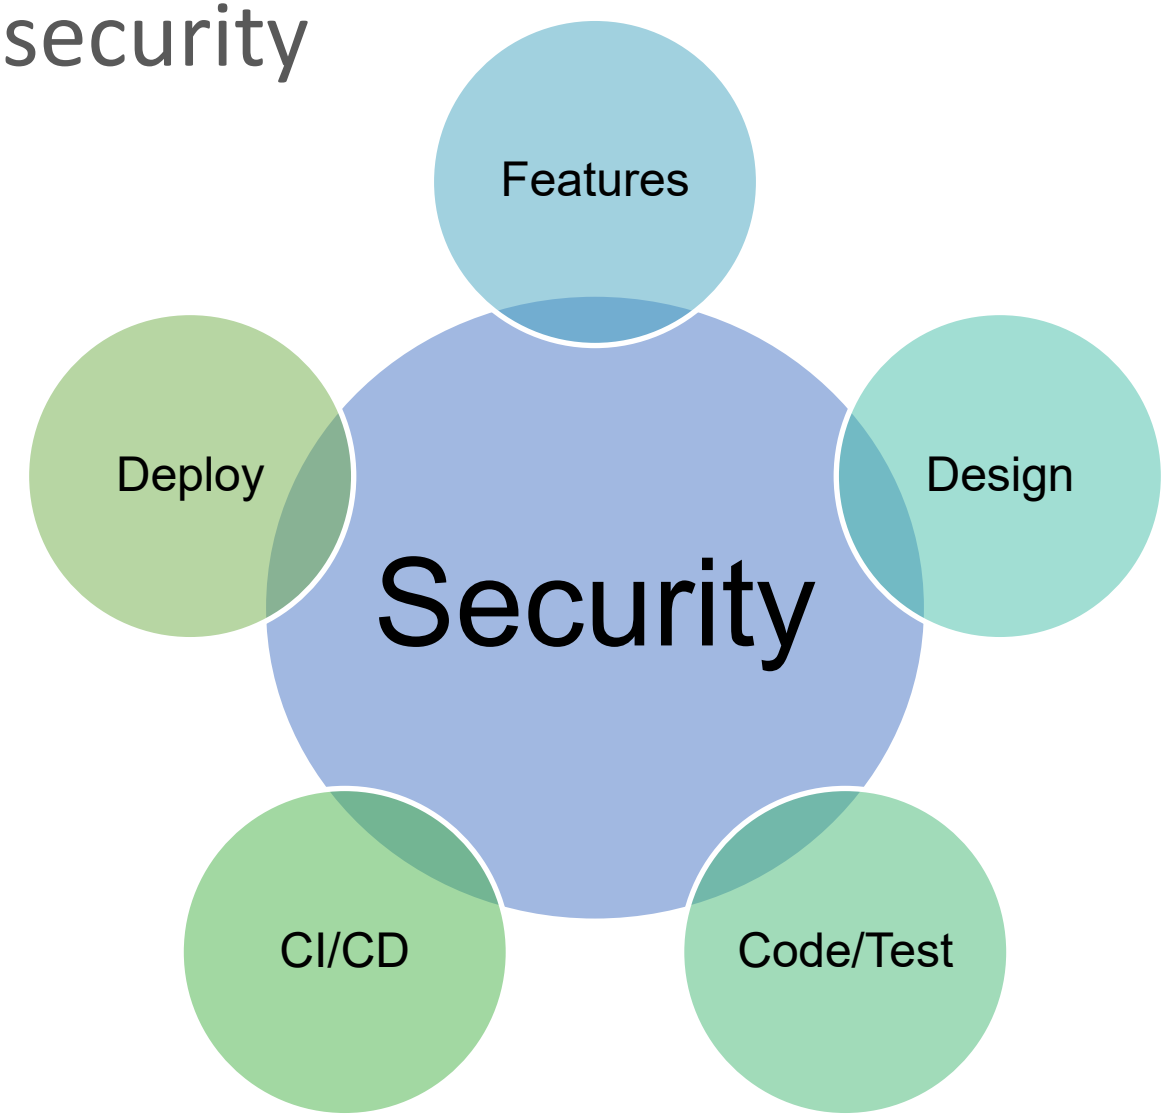

DevSecOps Is the extension of the DevOps culture for the inclusion of Security

Where in DevOps?

- To keep up with the pace of Continuous Delivery, security must "**shift left**"
- Earlier into **design** and **coding** and into the **automated** test cycles
- Before the system is designed and built

Continuous security

Road to DevSecOps
